Course Objectives: Through the study of the continent of Africa from ancient times to the eve of the colonial period, we will identify and dispel colonial myths about African people and their societies. Understanding Africa's rich history will then allow us to develop more informed views and judgments about European colonization and related events that took place in the 20th century, and also about current conditions in different parts of the continent.

This course will focus on the following major topics: the rise of early African societies and civilizations; the spread of Islam; oral traditions as history; Africa and international trade; and the development of the Atlantic slave trade. Since this is a history course, we will be concerned especially with change over time – how and why particular changes occurred and how peoples' lives were affected. The course is divided into three main time periods: Unit I, Early African Civilizations (3000 BCE - 800 CE); Unit II, Africa and the Islamic World (ca. 800-1500); and Unit III, The Atlantic World -- Africa, Europe, and the Guinea Trade (ca. 1450-1850). There is an ending overview with two films on the 'Black Atlantic' African diaspora.

Student Learning Goals – At the completion of this course, the student should be able to:

- Identify and compare **major civilizations** that arose in Africa prior to the mid-19th C.;
- Explain how **complex societies** developed in Africa out of varying systems of subsistence production and external trade;
